

# ENVIRONMENTAL STATEMENT:

Poole Waite & Co Ltd is committed to minimising the impact of its activities on the environment.

We firmly believe in providing a service that is environmentally friendly. We abide by the laws and regulations prepared by the UK government.

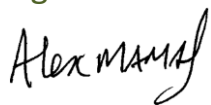

We actively promote recycling internally and ensure all staff adhere to the systems put on place. We recycle materials where we can, reusing all packaging boxes and materials.

We evaluate all activities, undertaking regular reviews, to ensure we are operating as efficiently as possible to minimise waste produced. We look to source and promote products ranges to minimise the environmental impact during both production and distribution.

When powder coating products we use the latest low energy powder from Akzonobel (Interpon 610E) estimated to have a 29% embodied carbon saving when compared to similar products powder coated overseas. Tested to ISO 19045.

The introduction of our ECO range of ironmongery products now allows our clients to make their own embodied carbon savings and is something we are now actively promoting.

Signed
